Adapted from the Vanderbilt Rating Scales developed by Mark L. Wolraich, MD

PRE-EXISTING PROBLEMS

Use the following to assess severity:

None: The symptom is not present.

Mild: The symptom is present but is not significant enough to cause concern to the child, to his/her friends, or adults.

Moderate: The symptom causes some impairment of functioning or social embarrassment.

Severe: The symptom causes impairment of functioning or social embarrassment to such a degree that it requires specific

treatment.

	None	Mild	Moderate	Severe
Motor Tics-repetitive movements: jerking or twitching (e.g., eye blinking-eye opening,				
facial or mouth twitching, shoulder or arm movements)-describe:				
Buccal-lingual movements: Tongue thrusts, jaw clenching, chewing movement besides
